Description of site design

A description of the finished site, explaining the various decisions you made. Use screen shots with captions to explain major design decisions.

Main Page

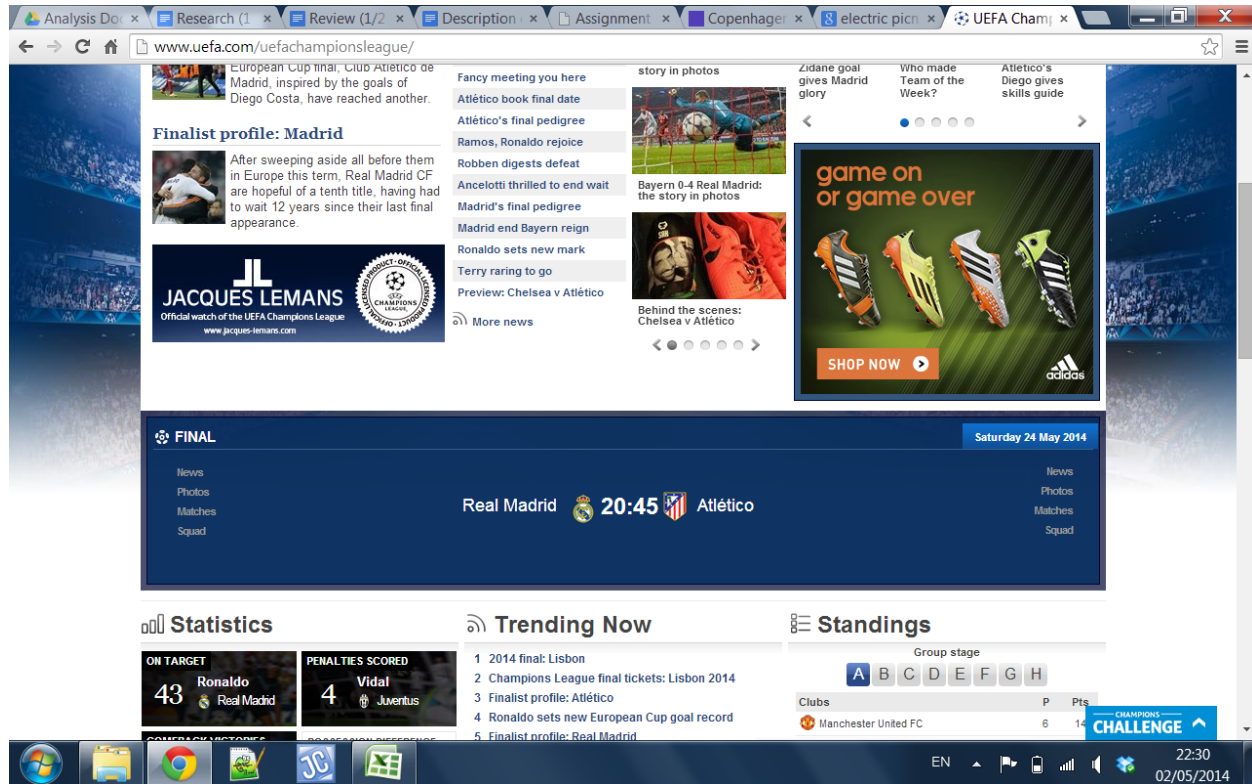

This was the first page we worked on together and probably the one that took the longest to get right. Wagner found the idea for the rolling banner on <https://www.centraldoseventos.com.br/> and keini used his skills with photoshop to create our own one, with relevant pictures of bands. The official dates, stages, and times for when each act will be playing is not yet released, so we just fabricated these details to make it feel more like a real website.

The idea for the banner we created and placed at the top of every page came from the <http://www.visitcopenhagen.com/copenhagen-tourist> website and was the inspiration behind it.

Alan found the image above and Wagner took the lettering out of it. It started out up in the top left corner like the Copenhagen website, but later on Wagner found an image of a tent and put it with our nice lettering and at some stage we decided our new logo actually looked nice centralised at the top.

The Background image was found about halfway through the project and we really like it, but it eventually caused a lot of problems and we decided it was causing more trouble than it was adding benefit so we took it out.

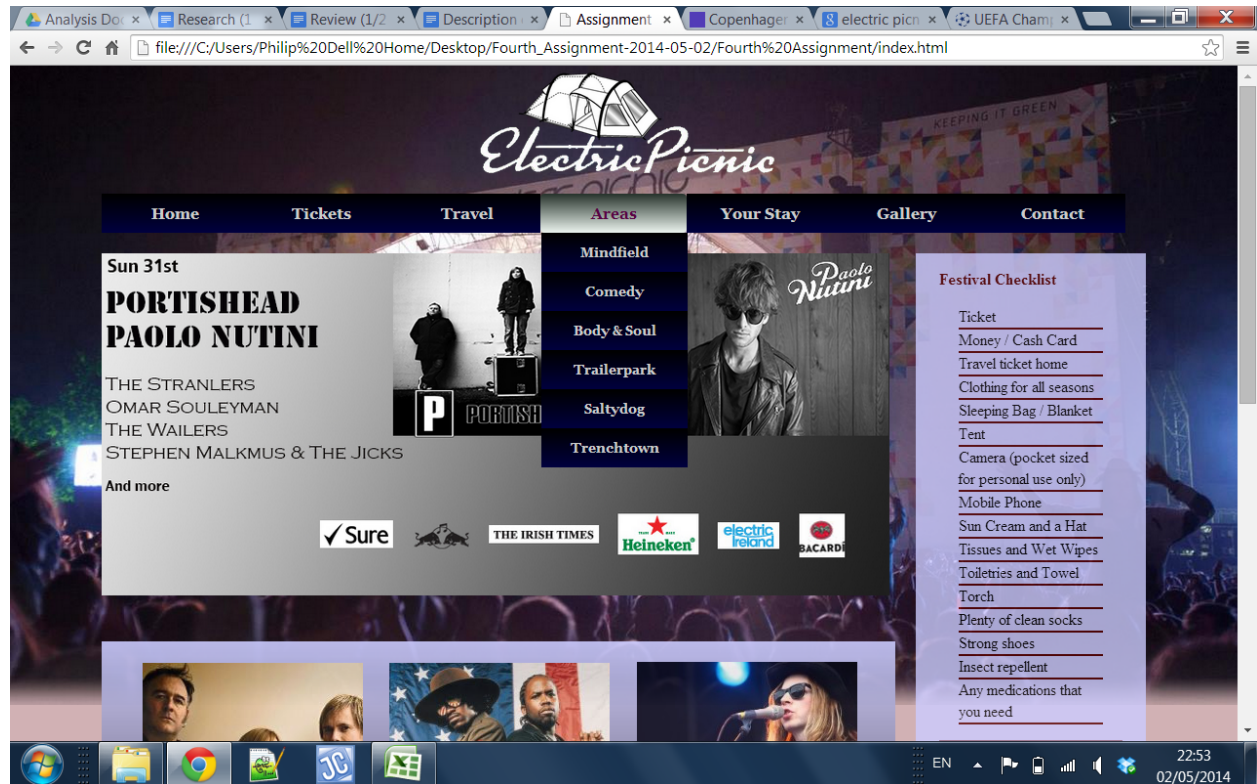

Alan then found an example from another site that used an image for the background but faded it to a colour, Keini then took our image and faded it in a similar way which solved the resizing/different screen size issues.

Below our scrolling banner we have one large image with six bands on it. Hovering over each band will display the name of the band and if clicked will bring the user to their official website. This was originally six separate pictures of varying sizes, all separated by pixel sizes and with margins in between. This worked well at full screen but when the website was resized it threw the images all over the place and out of sync so we knew we had to change it. We ended up making one large image with all the images placed in it, and Wagner found a book that taught him how to map each image area to a band name and website.

Travel, Areas, and Your Stay

Within these tabs there are four, six, and nine subsections. We decided that if we were to give each subsection its own page we would have two problems; some pages would have very little information on them and we would end up having too many pages (something Alan and Keini knew all too well could happen after seeing Wagners Resident Evil website, with a whopping 32 pages!)

So we decided to simply have three sections with their subsections within. We layed it out similar to Wikipedia.com in that the user clicks on the tab for “Travel” for example, and then has the choice of Bus, Car, Train, Cycle. We also decided to have a drop down feature on the nav bar so that each subsection can be selected from the nav bar. Knowing that these sections would get very large, we decided to add in “return” buttons at the end of each section that returned the user to the top of the screen.

Research

Some links or screenshots of sites that have inspired you (can be subject related or not)

<http://www.electricpicnic.ie/>

<http://www.oxegen.ie/>

<https://www.centraldoseventos.com.br/>

<http://www.coachella.com/>

While researching our website, we looked at the official Electric Picnic website first. We got a lot of information from that site such as travel, areas, lineup, so that we could have accurate content on our website.

We also looked at other festival websites such as Oxygen and Coachella, to see how their websites were presented, and if anything could be gained from them.

We got the rotating panel idea from Centraldosseventos.com and created our own version that listed which main acts would be playing on which day. As this information is not actually available yet, we simply made it up to give a more realistic experience.

Review

A group statement reflecting on the work and process.

During the creation process the group splitted the web in section, the first meeting were decided which top was going to be used after decided the group sat and started brainstorming about layouts , designs and how the web site would look like.

At first week was given to each member a task in order to complete the project, the first task was research about the Electric Picnic, each team member came up with different ideas and information that they would like to see on the website, then again the group met and started to share the information with each other.

The second phase of the project was to create the main page which would be used as a template for the other pages. After many tries the main page finally was created.

The third phase was to give again each team member a task to do. Wagner was given the layout and design of the page, Alan was to collect the information which would go on each page and Keini was given the Javascript. each member worked on their own task but always helping the other members with their parts as well in order to complete the project in the best way.

An important thing about working as a group was to see how each member can contribute to the project and implement the task that has to be done. During the whole project the group did not have any problem with any team member and we all worked well as a team, however there was loads of discussions about which topic was going to be chosen, colours, background and design.

The best part of the whole project was to share everything that was learned during the year and sharing knowledge. Each team member brought with them a skill in a certain area which helped the group as a whole to produce a better project than any team member could have created on their own.

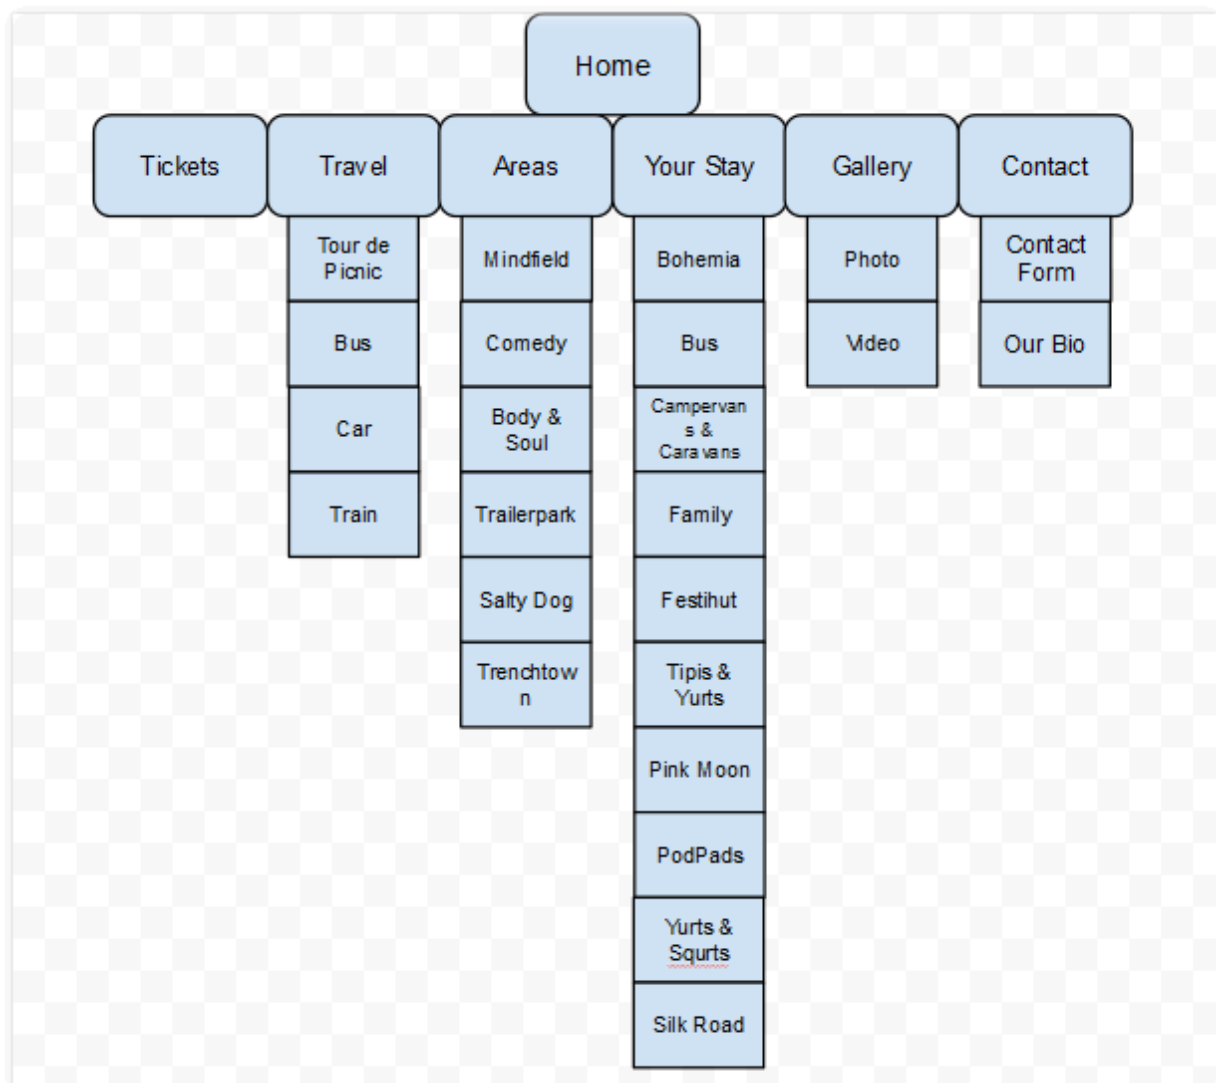

However during the creation process, a lot of challenges were faced, codes were broken, codes did not work, colours did not match which make the team to put a lot of effort to fix them. Some of the codes were really hard to fix which took long time to be fixed. One of the problems we found out during the project was the background image we had chosen did not work as intended when resized. We eventually came up with a solution by fading the bottom of the image to a

background colour so that the image didn't just stop dramatically, and then the image was dropped completely when the window size got small enough.

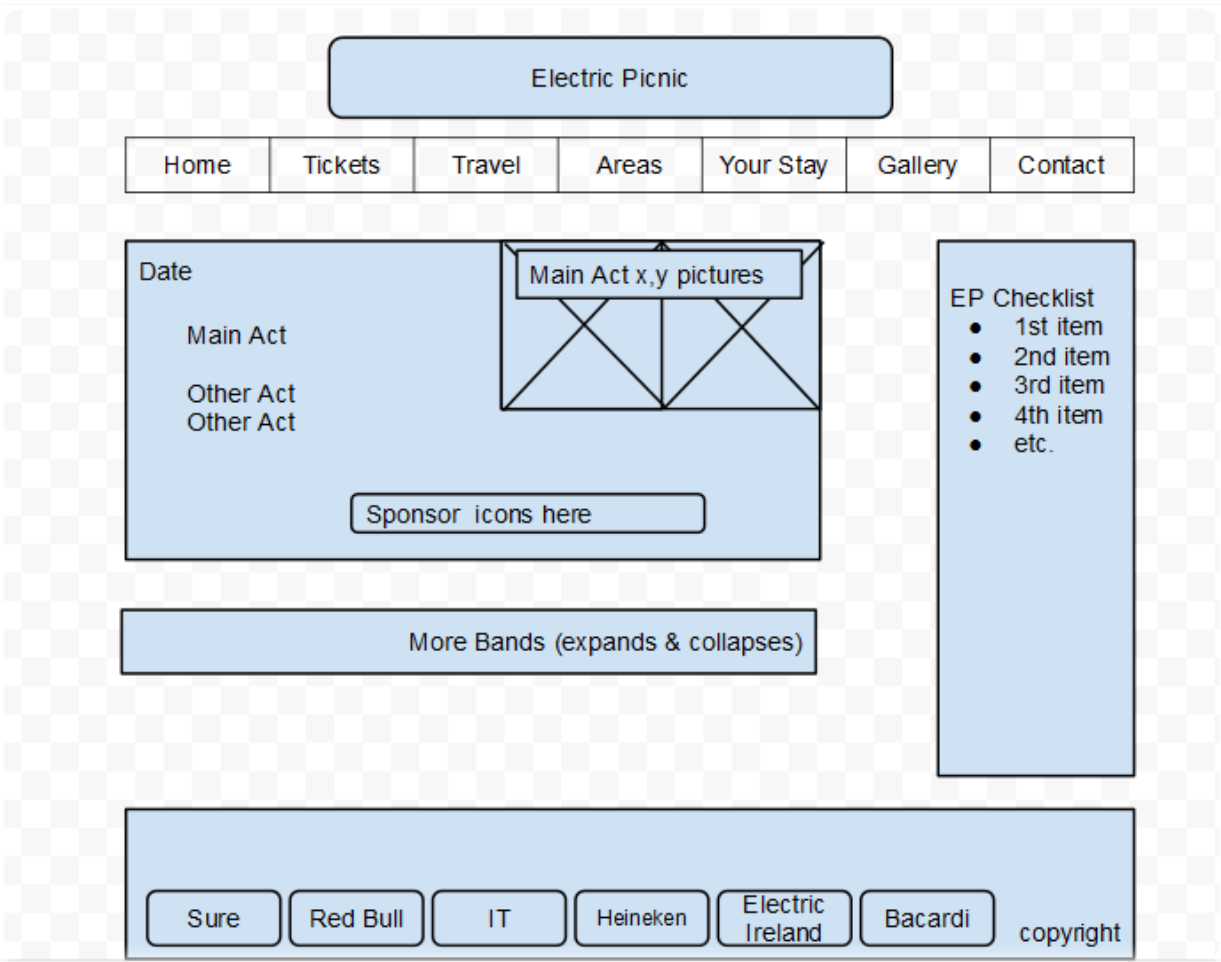

It was quite difficult working on the same html/css/java, there ended up being a lot of file versions with various minor and major changes which we managed to put back together again.

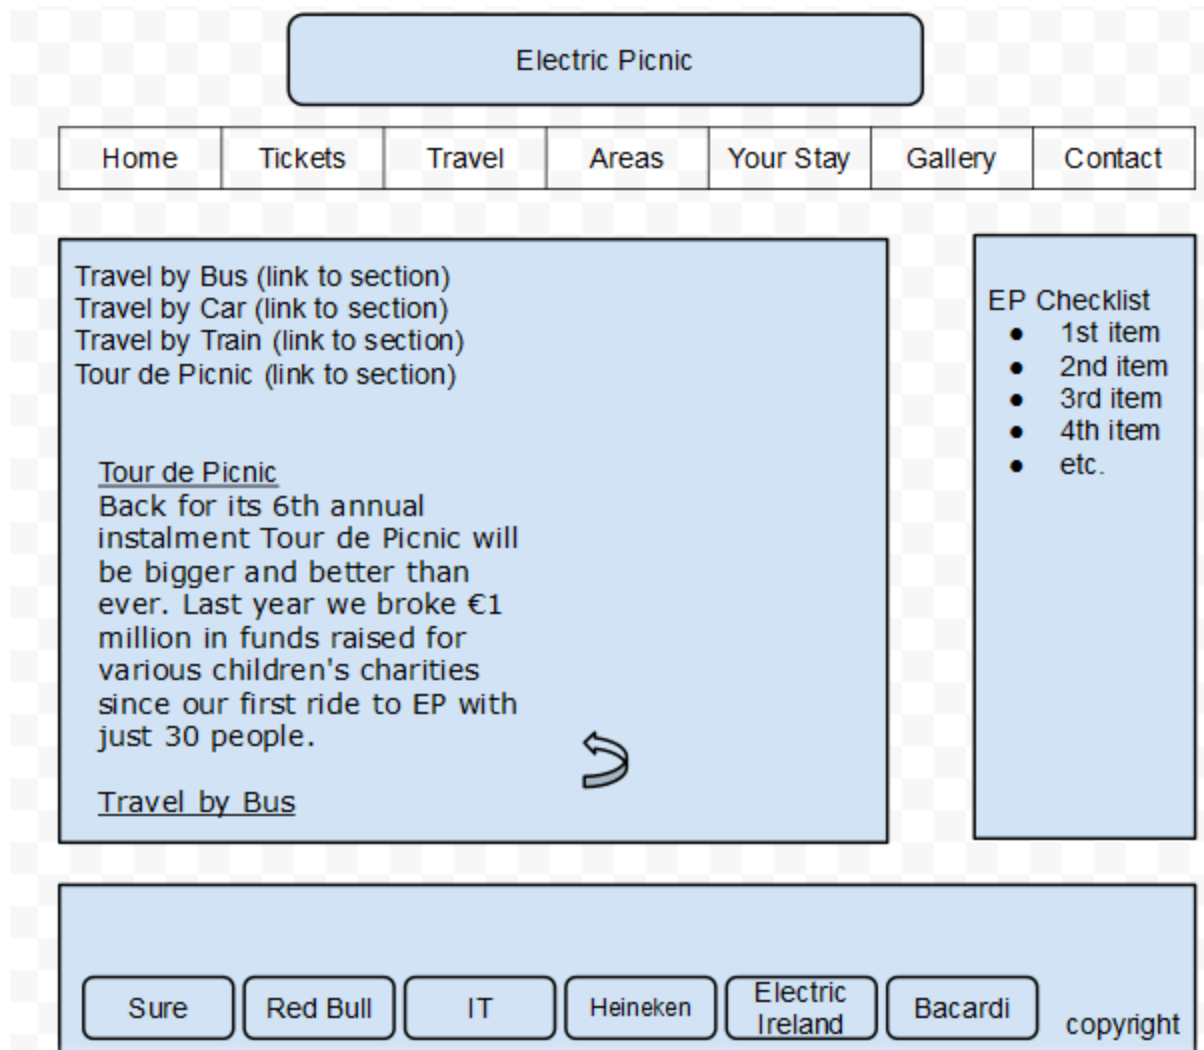

Overall it was a good experience and a shame that it was our only group project this year. Working in a group is very different than working on your own. With the problems mentioned above but also things like finding time that suited us all to meet up.

Site Map

Wire-frame

The initial wire frame is like those that we posted on the analysis document, then we decided to change the footer and put copyright on the advertisement on the photos at the banner. And for the footer we use this style as recreated by us.

Terms and Condition/ Privacy section

We used the privacy and terms & condition from the original Electric picnic website, also we create a fictitious enquires email and a name as developers festival to be contact. The code is our own code the creation as our own ideas inspired from the websites on the web references.
